SUMMARY

Software engineer with experience building production web applications spanning AI, healthcare, regulatory compliance, and digital communities. I enjoy solving ambiguous engineering problems, from integrating AI services and designing reliable logging systems to improving developer workflows and shipping user-focused products. My long-term goal is to build intelligent software that combines thoughtful user experiences with dependable engineering.

EXPERIENCE

Software Engineer April 2025 – June 2026

Bincom Dev Center · Lagos, Nigeria

Collaborated with a multidisciplinary engineering team to deliver production software across healthcare, compliance, and community platforms.

- Built and maintained major frontend features across five production applications using React and TypeScript.
- Integrated Gemini-powered AI functionality through Supabase Edge Functions, including AI-assisted image analysis and ingredient evaluation.
- Designed centralized audit and error logging systems that improved production debugging and reduced time to diagnosis across multiple projects.
- Implemented secure authentication, onboarding flows, and role-based access control across healthcare and compliance products.
- Executed database schema migrations and supported deployment workflows.
- Authored technical documentation including PRDs, migration guides, architecture diagrams, backend specifications, and project handover documents.
- Collaborated with designers, QA engineers, product managers, and technical writers throughout the full software development lifecycle.

PROJECTS

FoodRisk AI

AI-assisted food safety platform helping users identify allergens and understand food ingredients.

- Built the full application frontend from scratch including all major feature modules.
- Replaced conventional OCR with AI-assisted image analysis after evaluating accuracy limitations — questioning the approach, not optimising the wrong tool.
- Designed an API key rotation mechanism to improve service reliability under quota and rate-limit constraints, allowing administrators to manage multiple Gemini API keys with automatic failover.
- Implemented centralized audit and error logging to accelerate debugging and support QA workflows.
- Built administrative dashboards with granular role-based permissions for Admin and Super Admin users.

Stack: React · TypeScript · Tailwind CSS · Supabase · Gemini API · Vercel

Sponsor Compliance System

Compliance platform supporting UK Home Office Licensed Sponsors.

- Improved application architecture, maintainability, and UI consistency across existing modules.
- Designed audit and diagnostic logging for operational visibility.
- Implemented a secure migration strategy to transfer production data from a restricted Lovable-managed development environment into a standalone Supabase deployment — a migration conventional tools could not support.

Stack: React · TypeScript · Supabase · Tailwind CSS · Cloudflare

Spirit Connect

Community-driven digital prayer and journaling platform.

- Built automated guided prayer sessions with synchronized text, speech synthesis, and background audio.

- Resolved cross-device consistency issues affecting prayer session automation across browsers and mobile operating systems through multiple stakeholder iterations.
- Developed testimony moderation, prayer management systems, and administrative dashboards.

Stack: *React · JavaScript · Cloudflare · Resend · Speechmatics*

TECHNICAL IMPACT

- Contributed to five production software products across healthcare, compliance, and digital communities.
- Facilitated technical learning for 100+ students across multiple development cohorts at Bincom Academy.
- Collaborated across engineering, QA, product, design, and documentation teams on concurrent projects.
- Introduced engineering improvements — centralized logging, AI key rotation, secure migrations — that increased maintainability, reliability, and debugging efficiency.
- Authored extensive technical documentation supporting production software delivery and long-term maintainability.

SKILLS

Languages JavaScript · TypeScript · Dart · HTML · CSS
Frameworks React · Tailwind CSS
Backend & Cloud Supabase · Firebase · REST APIs · Edge Functions
AI Gemini API · AI-assisted image analysis · Prompt-driven features
Tools Git · GitHub · Cloudflare · Vercel · Resend · Speechmatics

EDUCATION

B.Sc. Computer Science*2024*
University of Nigeria, Nsukka
Research: Receipt Genius — Design and Implementation of a Receipt Generation Application for SMEs
